gathering the proceedings of the 2018 intelligent systems conference intellisys 2018 this book offers a remarkable collection of chapters covering a wide range of topics in intelligent systems and computing and their real world applications the conference attracted a total of 568 submissions from pioneering researchers scientists industrial engineers and students from all around the world these submissions underwent a double blind peer review process after which 194 including 13 poster papers were selected to be included in these proceedings as intelligent systems continue to replace and sometimes outperform human intelligence in decision making processes they have made it possible to tackle many problems more effectively this branching out of computational intelligence in several directions and the use of intelligent systems in everyday applications have created the need for such an international conference which serves as a venue for reporting on cutting edge innovations and developments this book collects both theory and application based chapters on all aspects of artificial intelligence from classical to intelligent scope readers are sure to find the book both interesting and valuable as it presents state of the art intelligent methods and techniques for solving real world problems along with a vision of future research directions

the comprehensive guide to engineering alternative and renewable energy systems and applications updated for the latest trends and technologies this book was designed to help engineers develop new solutions for the current energy economy to that end it provides technical discussions along with numerous real world examples of virtually all existing alternative energy sources applications systems and system components all chapters focus on first order engineering calculations and consider alternative uses of existing and renewable energy resources just as important the author describes how to apply these concepts to the development of new energy solutions since the publication of the critically acclaimed first edition of this book the alternative renewable and sustainable energy industries have witnessed significant evolution and growth hydraulic fracturing fossil fuel reserve increases the increasing popularity of hybrid and all electric vehicles and the decreasing cost of solar power already have had a significant impact on energy usage patterns worldwide updated and revised to reflect those and other key developments this new edition features expanded coverage of

topics covered in the first edition as well as entirely new chapters on hydraulic fracturing and fossil fuels hybrid and all electric vehicles and more begins with a fascinating look at the changing face of global energy economy features chapters devoted to virtually all sources of alternative energy and energy systems offers technical discussions of hydropower wind passive solar and solar thermal photovoltaics fuel cells chp systems geothermal ocean energy biomass and nuclear contains updated chapter review questions homework problems and a thoroughly revised solutions manual available on the companion website while alternative energy systems and applications second edition is an ideal textbook reference for advanced undergraduate and graduate level engineering courses in energy related subjects it is also an indispensable professional resource for engineers and technicians working in areas related to the development of alternative renewable energy systems

modern society requires a specialized persistent approach to its service delivery cloud computing offers the most logical answer through a highly dynamic and virtualized resource made available by an increasing number of service providers advanced research on cloud computing design and applications shares the latest high quality research results on cloud computing and explores the broad applicability and scope of these trends on an international scale venturing into the hot button issue of its services evolution and what we need to do to be prepared for future developments in cloud computing this book is an essential reference source for researchers and practitioners in the field of cloud computing as well as a guide for students academics or anyone seeking to learn more about advancement in its services this publication features chapters covering a broad range of relevant topics including cloud computing for e government cloud computing in the public sector security in the cloud hybrid clouds and outsourced data its service personalization and supply chain in the cloud

electrochemical power sources fundamentals systems and applications hydrogen production by water electrolysis offers a comprehensive overview about different hydrogen production technologies including their technical features development stage recent advances and technical and economic issues of system integration allied processes such as regenerative fuel cells and sea water electrolysis are also covered for many years hydrogen production by water electrolysis was of minor importance but research and development in the field has increased

significantly in recent years and a comprehensive overview is missing this book bridges this gap and provides a general reference to the topic hydrogen production by water electrolysis is the main technology to integrate high shares of electricity from renewable energy sources and balance out the supply and demand match in the energy system different electrochemical approaches exist to produce hydrogen from renewable energy sources covers the fundamentals of hydrogen production by water electrolysis reviews all relevant technologies comprehensively outlines important technical and economic issues of system integration includes commercial examples and demonstrates electrolyzer projects
