this book is the result of a special issue published in applied sciences entitled low binder concrete and mortars the main aim of this work is to

highlight practical approaches that facilitate the production of low binder content concrete and mortar with an acceptable level of technical performance e.g. mechanical and durability and environmental impacts e.g. ecotoxicological and global warming its contents are organized in the following sections: developing zero cement binder, ecotoxicological and chemical characteristics of the non-conventional materials used to replace cement and natural aggregates, reduce the environmental impacts and resources use of binders, modify the characteristics of the cement-based materials, low binder concrete on site application, sustainable cement-based materials in road engineering.

includes part 1: number 2 books and pamphlets including serials and contributions to periodicals July-December.

This book states that the proceedings gather selected papers from the 2022 5th International Conference on Civil Engineering and Architecture (ICCEA 2022) which was held in Hanoi, Vietnam, on December 16-18, 2022. The conference is the premier forum for the presentation of new advances and research results in the fields of theoretical, experimental, and practical civil engineering and architecture, and this proceedings from the conference mainly discusses architectural design and project management, environmental protection and spatial planning, design and analysis of building materials and structural engineering and safety, and these materials can be useful and valuable sources for researchers and professionals working in the field of civil engineering and architecture.

Soil cement is a mixture of pulverized soil and measured amounts of portland cement and water compacted to high density. As the cement hydrates, the mixture becomes a hard, durable paving material. A bituminous wearing course is placed on the soil cement base to complete the pavements.
