annotation there is a maximum power and energy that you can put into or transmit through your optical system in many cases this maximum is well below the laser induced damage threshold this tutorial explains the factors and constraints that limit the power and energy handling capability of optical materials components and or systems because the lasers coming off the production lines are much more stable efficient and controlled than in the past today s engineers often do not have the insight into the technology as was required of first generation laser engineers however important insights into the use and performance of the laser and optical systems can be lost unless we remind ourselves at periodic intervals of the problems our predecessors had to face
