the long awaited 2nd edition of this best selling research methods handbook is fully updated and includes brand new coverage of online research methods and techniques mixed methodology and qualitative analysis this edition includes two new contributed chapters professor julie mcleod sue childs and elizabeth lomas focus on research data management applying evidence from the recent jisc funded datum project dr andrew shenton examines strategies for analysing existing documents the first to focus entirely on the needs of the information and communications community this handbook guides the would be researcher through the variety of possibilities open to them under the heading research and provides students with the confidence to embark on their dissertations the focus here is on the doing and although the philosophy and theory of research is explored to provide context this is essentially a practical exploration of the whole research process with each chapter fully supported by examples and exercises tried and tested over a whole teaching career readership students of information and communications studies and archives and records management and practitioners beginning a piece of research

research methods information systems and contexts second edition presents up to

date guidance on how to teach research methods to graduate students and professionals working in information management information science librarianship archives and records and information systems it provides a coherent and precise account of current research themes and structures giving students guidance appreciation of the scope of research paradigms and the consequences of specific courses of action each of these valuable sections will help users determine the relevance of particular approaches to their own questions the book presents academics who teach research and information professionals who carry out research with new resources and guidance on lesser known research paradigms provides up to date knowledge of research methods and their applications provides a coherent and precise account of current research themes and structures through chapters written by authors who are experts in their fields helps students and researchers understand the range of quantitative and qualitative approaches available for research as well as how to make practical use of them provides many illustrations from projects in which authors have been involved to enhance understanding emphasises the nexus between formulation of research question and choice of research methodology enables new researchers to understand the implications of their planning decisions

from the reviews this book nicely complements the existing literature on information and coding theory by concentrating on arbitrary nonstationary and or nonergodic sources and channels with arbitrarily large alphabets even with such generality the authors have managed to successfully reach a highly unconventional but very fertile exposition rendering new insights into many problems mathematical reviews

assuming no previous knowledge this book provides comprehensive coverage for a first course in research statistical methods in computing or it can be used as on the job self training for professionals it shows how to apply these methods to the current problems faced in a variety of fields but with special emphasis on computer science and information systems a research model applicable to applied research is

proposed and discussed throughout the text this model accommodates scientific methods of research including empirical quantitative qualitative case study and mixed methods using a non threatening approach to the subject the text avoids excessive mathematics and abstract theory it includes numerous exercises and examples that help students understand the relevance of research methodology applications a dvd with statistical tables data files etc numerous instructors resources are available upon adoption this book has the following selected topics introduction to statistics descriptive statistics data mining probability estimation hypothesis testing chi square tests linear regression variance random number generation guide to research model construction statistical software axiomatic research simulation and clustering methods simulations statistical tables

the handbook of pharmaceutical manufacturing formulations third edition volume one compressed solid products is an authoritative and practical guide to the art and science of formulating drugs for commercial manufacturing with thoroughly revised and expanded content this first volume of a six volume set compiles data from fda new drug applications patent applications and other sources of generic and proprietary formulations to cover the broad spectrum of gmp formulations and issues in using these formulations in a commercial setting a must have collection for pharmaceutical manufacturers educational institutions and regulatory authorities this is an excellent platform for drug companies to benchmark their products and for generic companies to formulate drugs coming off patent

this book is designed for a first course in research and statistical methods in computing and does not assume the student has previous knowledge of the subject research methods for information systems shows how to apply research and statistical methods to the current problems faced in a variety of fields but with special emphasis on computer science and information systems it takes a non threatening approach to the subject avoiding excessive mathematics and abstract theory and includes numerous exercises and examples to ensure the students

understand the relevance of research methodology applications throughout the text lead articles examples and exercises provide students with actual instances of various research methods including implementation driven research mathematical proof techniques empiricism and observational research this diversity in research methods in the computing fields is due to the fact that topics in the disciplines of computer science and information systems are technologically based rather than theory driven logic the author also exposes students to qualitative and mixed research methods this is extremely important since within information systems there has been a general shift in information system research away from technological studies toward more managerial and organizational issues research method topics covered and summarized include proposal formulation research design methods of investigation methods of demonstrating concepts approaches to research validation and documentation of research results

this book addresses contemporary challenges in artificial and computational intelligence particularly focusing on decision making systems it explores current trends in computer science including the collection analysis and processing of information the advancement of modern information and computer technologies for data analysis and processing in data mining and machine learning is highlighted showcasing their role in enhancing the efficiency of information processing by reducing time and increasing accuracy the book comprises 16 scientific papers presenting cutting edge research in data mining machine learning and decision making it is categorized into three sections 1 data engineering computational intelligence and inductive modeling 16 papers this book is designed for scientists and developers specializing in data mining machine learning and decision making systems

the book s chapters provide background on how and why the cipp context input process product model was developed a detailed presentation of the model an explanation of the key role of an evaluation oriented leader who can decide what and when to evaluate detailed presentations on evaluation design budgeting and contracting procedures and tools for collecting analyzing and reporting evaluation information and procedures for conducting standards based meta evaluations evaluations of evaluations these topics are interspersed with illustrative evaluation cases in such areas as education housing and military personnel evaluation

presents the state of the technology and points to future directions for semantic computing semantic computing a rapidly evolving interdisciplinary field seeks to structure design and manipulate computer content to better satisfy the needs and intentions of users and create a more meaningful user experience this remarkable contributed work examines the art engineering technology and applications of the field moreover it brings together researchers from such disciplines as natural language processing software engineering multimedia semantics semantic signal processing and pattern recognition in order to provide a single source that presents

the state of the technology and points to new breakthroughs on the horizon semantic computing begins with an introduction that explores the concepts technology applications and future of semantic computing next the book is divided into four parts part one semantic analysis part two semantic languages and integration part three semantic applications part four semantic programming and interface as readers progress through the book they ll learn not only the underlying science but also the fundamental technological building blocks of semantic computing moreover they ll discover a variety of cross disciplinary solutions to current computing and communication problems throughout the book references to the primary literature enable further investigation of each individual topic semantic computing is ideal for industrial managers researchers and engineers seeking to design the next generation of computing systems in order to better meet user needs it is also recommended as a textbook for senior undergraduate and graduate level semantic computing courses
