publisher description

economics is often defined as the science of choice or human action but choice and action are essentially mental phenomena an aspect rarely mentioned in the economics discourse choice while not always a conscious or rational process is held to involve beliefs desires intentions and arguably even free will actions are often opposed to mere bodily movements with the former being in some sense only understandable in reference to mental processes while the latter are understandable in entirely non mental physical terms while philosophers have long concerned themselves with the connections between these concepts economists have tended to steer clear of what might appear to be an a priori debate at the same time philosophers working on these important notions have tended to not dirty their hands with the empirical real world applications in which economists are specialized this volume fills these gaps by bringing economists and philosophers of mind together to explore the intersection of their disciplines

upon hearing that ronald coase had been awarded the nobel prize a fellow economist s first response was to ask with whom coase had shared the prize whether this response was idiosyncratic or not i do not know i expect not part of this type of reaction can no doubt be explained by the fact that coase has often been characterized as an economist who wrote only two significant or influential papers the nature of the firm 1937 and the problem of social cost 1960 and by typical professional standards of significant and influential i e widely read and cited this perception embodies a great deal of truth even subsequent to coase s receipt of the prize this is not to say that there have not been other important works the marginal cost controversy 1946 and the lighthouse in economics 1974 come immediately to mind here only that in a random sample of say one hundred economists one would likely find few who could list a coase bibliography beyond the two classic pieces noted above in spite of coase s significant publication record the purpose of this collection is to assess the development of tensions within and prospects for coasean economics those aspects of economic analysis that have evolved out of coase s path breaking

work two major strands of research can be identified here law and economics and the new institutional economics

in this volume more than forty leading economists including nobel laureate paul samuelson and robert solow critically evaluate the work of geoff harcourt

economics as a social science economics as an ecological science economics as a behavioral science economics as a political science economics as a mathematical science economics as a moral science economics and the future of man

written to make sure the student understands how economic models apply to the real world as well as the models themselves draws heavily on american examples

an accessible thoroughly engaging look at how the economy really works and its role in your everyday life not surprisingly regular people suddenly are paying a lot closer attention to the economy than ever before but economics with its weird technical jargon and knotty concepts and formulas can be a very difficult subject to get to grips with on your own enter greg ip and his little book of economics like a patient good natured tutor greg one of today's most respected economics journalists walks you through everything you need to know about how the economy works short on technical jargon and long on clear concise plain english explanations of important terms concepts events historical figures and major players this revised and updated edition of greg's bestselling guide clues you in on what's really going on what it means to you and what we should be demanding our policymakers do about the economy going forward from inflation to the federal reserve taxes to the budget deficit you get indispensable insights into everything that really matters about economics and its impact on everyday life special sections featuring additional resources of every subject discussed and where to find additional information to help you learn more about an issue and keep track of ongoing developments offers priceless insights into the roots of america's economic crisis and its aftermath especially the role played by excessive greed and risk taking and what can be done to avoid another economic cataclysm digs into globalization the roots of the euro crisis the sources of china's spectacular growth and why the gap between the economy's winners and losers keeps widening

this authored monograph presents an unconventional approach to an important topic in economic theory the author is an expert in the field of viability theory and applies this theory to analyze how an economy should be dynamically endowed so that it is economically viable economic viability requires an assumption on the joint evolution of transactions fluctuations of prices and units of numeraire goods the sum of the transactions values and the impact of price fluctuations should be negative or equal to zero the book presents a computation of the minimum endowment which restores economic viability and derives the dynamic laws that regulate both transactions and price fluctuations the target audience primarily comprises open minded and mathematically interested economists but the book may also be beneficial for graduate students

twenty four economists discuss how they promote egalitarianism democracy and ecological sanity through research activism and policy engagement economics and the left presents interviews with twenty four leading progressive economists all of these practitioners of the dismal science are dedicated to both interpreting the world and changing it for the better the result is a combustible brew of ideas and reflections on major historical events including the covid 19 pandemic and its impact on the global economy interviewed are michael ash nelson henrique barbosa filho james k boyce ha joon chang jane d arista diane elson gerald epstein nancy folbre james k galbraith teresa ghilarducci jayati ghosh ilene grabel costas lapavitsas zhongjin li william milberg l once ndikumana ozlem onaran robert pollin malcolm sawyer juliet schor anwar shaikh william spriggs fiona tregenna and thomas weisskopf

the bulk of contemporary economics assumes rather than explains differences between people or groups of people yet many of these differences are produced by society or they imply differing opportunities and outcomes this book argues that economists should concern themselves with the explanation of the social causes and effects of such differences d ippoliti introduces the concept of diversity to summarise all differences that are of social origin and that a theory or model seeks to explain this contrasts with the traditional concept of heterogeneity that instead refers to differences that are deemed to be exogenous of economic theory in approaching this the book ranges from the fields of methodology and history of economics to applied empirical work as well as gender diversity which is considered in depth the analysis of the thinking of two major economists of the past john stuart mill and gustav schmoller demonstrates how gender diversity exemplifies some of the fundamental issues in economics such as the division of labour society's capacity to reproduce itself and the role of social institutions and their impact on individual and collective behaviour the book maintains that growth of gdp and of the services sector cannot be trusted to automatically bring about greater inclusion of women in the labour market active policy interventions are needed spanning from the removal of discrimination to the provision of public services and the establishment of fair competition in the market along with an improved division of social and political power between the sexes this work will be of interest to researchers and students focusing on the history of economic thought labour economics social policy and gender studies

based on the premise that mainstream economics has become excessively specialized and formalized entering a state of *de facto* withdrawal from the study of the economy in favour of exercises in applied mathematics this book illustrates the potentially enlightening relationship between economics and a wide range of social science disciplines
